

IN THE CLAIMS

Please amend the status of the claims to that indicated by the following:

Claims 1-10 (canceled)

11. (currently amended) A hose reel assembly, comprising:

a hose reel spool having a riser therethrough;

an upright support member having a laterally extending motor and gearbox and hub to which said hose reel spool is connectable on only one side of said hub via a plurality of studs and is securable to said one side of said hub with only a single lug nut for each stud of said plurality of studs, each said stud having a lug nut on only one end of said stud, said hose reel spool having said riser therethrough for providing a fluid path in combination with said upright support member, said hose reel spool being removable from said hub for servicing; and,

an integrated frame housing said upright support member and said hose reel spool with loads of said hub being taken up, or supported, by said upright support member and not transmitted to bearings of a drive unit.

12. (previously presented) The hose reel assembly according to Claim 11, wherein said integrated frame includes a gearbox assembly.

Claims 13 – 14 (canceled)

15. (previously presented) The hose reel assembly according to Claim 11,

wherein said hose reel spool includes a rewind speed controller and a torque multiplier housing a gear reduction.

16. (previously presented) The hose reel assembly according to Claim 11, wherein said hose reel spool comprises two opposing components abutting one another.

17. (previously presented) The hose reel assembly according to Claim 16, wherein said hose reel spool has an interior surface about which a hose is able to be wound, said interior surface of said hose reel spool tapering towards a central area of hose reel spool for facilitating both hose winding and a stacking of spool components.

Claims 18 – 19 (canceled)
